DETAILED ACTION

1. This communication is in response to amendment filed 5/27/08.

Response to Amendment

2. Claims 1-6, 11-12, 15, 17, 19-22, and 24-26 are pending. Claim 6 has been rejoined by examiner's amendment. All pending claims have been allowed.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

Please change the status of claim 6 to (Currently Pending).

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance which applies to all pending claims.:

The claimed inventions pertain to a data processing apparatus and method for configuring a bid adjustment mechanism used in an electronic auction.

The following prior art references have been deemed most relevant to the allowed claim(s):

Rockoff et al. ("Design of an Internet-based System For Remote Dutch Auctions," of Rockoff, et al.) (hereafter "Rockoff") describes an Internet-based system for remote Dutch auctions. The system provides a bidder interface that presents to the bidder an auction clock showing the current offer price. The clock progresses at the rate set by the auction coordinator. When the offer price reaches a value acceptable to a bidder, the bidder clicks the bid button on the bidder interface. A bidder's click of the bid button causes the auction clock to stop. At that point, the bidder enters the amount of product he or she wishes to purchase at the indicated price. The rate of the clock is set by the auction coordinator using an auctioneer terminal interface and cannot be modified by any bidder (Rockoff, page 13 and Figure 4).

The bidder interface in Rockoff displays a current offer price and does not allow for setting a bidder-specific bid adjustment value by which the current bid can be adjusted, as required by the presently claimed invention. Instead, the bidder interface displays predefined price increments corresponding to clock movements that are common to all bidders and are set based on input provided by the auction coordinator, and not the input provided by an individual bidder, as claimed in the presently claimed invention. As a result, in Rockoff, there is no bidder-

specific bid adjustment mechanism as opposed to the present invention which allows each bidder to configure a distinct bid adjustment value according to this bidder's needs.

Accordingly, Rockoff deemed as exemplary closest prior art does not teach, suggest or render obvious the pertinent feature of the bid adjustment mechanism, in particular the feature of the bid adjustment mechanism configuration interface is configured to allow a bidder to specify a first and a second adjustment for a bid, and wherein the bid adjustment mechanism is a first bid adjustment mechanism set to the first adjustment value, and further comprising setting a second bid adjustment mechanism to a second bid adjustment value, and wherein adjusting a bid in the online auction includes determining which bid adjustment mechanism is actuated by the bidder.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
